WASTE SOURCE Vacuum Furnace used as part of tritium processing operation to heat the pellets to release tritium. Waste Stream will arise as part of the clean-out of the Chapelcross Processing plant.

PHYSICAL CHARACTERISTICS

General description: Robust stainless steel construction with an external stainless steel cooling jacket, redundant heater elements and associated furnace furniture. Specifically the vacuum furnace is stainless steel with copper cooling tubes and a Fecralloy (Fe-Cr-Al steel containing trace Yttrium and Zirconium) heating element.
