Total future arisings:		458.0		
Total waste volume:		458.0		

Number of waste packages in stock: At 1.4.2025..... - packages

Comment on arising rates: Arisings are in line with current decommissioning programmes and strategy.

Additional information on quantities: Waste within this waste stream is generated from decommissioning projects which will commence at a future date. As a result of this, minimal characterisation of waste volumes and fingerprints has been carried out and hence there is a large uncertainty in the potential arisings. Preliminary assessments indicate that the volumes may vary from -50% to +300% for LLW.

Uncertainty factors on volumes: Stock (upper): x - Arisings (upper): x 4.00
Stock (lower): x - Arisings (lower): x 0.50

WASTE SOURCE Demolition of uranium process plants.

PHYSICAL CHARACTERISTICS

General description: Building structural materials and miscellaneous soft waste i.e. rubber/PVC/paper. Most items size reduced in-situ. Some large items may be present.

Changes since waste generated: -

Bulk density (t/m³): ~ 1.0

Comment on density: Density stated is average for LLW final decommissioning.

CHEMICAL COMPOSITION

General description and components (%wt): Concrete, bricks and blockwork (69.5%), mild steel (28.5%), fibreglass (0.5%), wood (0.1%), glass (0.05%), plastic (1%), rubber (0.2%), cellulose (0.1%), others (0.1%). Percentages are by volume.

Chemical state: Neutral

Sheet metal proportion / thickness: Some sheet metal present (~30%), bulk metal (70%).

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off-site	Stream volume %
Size reduction	Off-site	= 24.0
Decay storage		
Low force compaction		
Supercompaction (HFC)		
Incineration		
Drying/dewatering/liquid separation		
Tie down/fixatives/strippable coating/painting application		
Decontamination		
Metal treatment		
Recycling / reuse		
Thermal treatment, including vitrification		
Encapsulation		
Polymer encapsulation		
Other physical treatment		
Other chemical treatment		
Containerisation		
Treatment not yet determined		
None		= 76.0

Comments on planned treatments:

Although there are no firm plans in place, based on current experience we have assumed the treatment methods set out in the table for the purposes of the 2025 UK Inventory. Waste not requiring treatment is assumed to be suitable for landfill.

RADIOACTIVITY

Source: The main sources of activity are uranium isotopes.

Uncertainty: Waste within this waste stream is generated from a number of decommissioning projects which will commence at a future date. The uncertainties quoted for each nuclide represent both the uncertainty in quantification without detailed sampling and the likely variation of nuclides in different buildings consigned wastes under this waste stream. It is exceptionally unlikely that all the waste included in this waste stream will have the same variation in nuclide fingerprint. Also activity levels will depend on degree of decontamination achieved.

Measurement of radioactivities: -

Chemical form of radionuclides:

- H-3: The chemical form of tritium has not been determined.
- C-14: The chemical form of carbon-14 has not been determined.
- Cl-36: Chlorine-36 is not expected to be present in significant quantity.
- Se-79: Selenium is not expected to be present in significant quantity.
- Tc-99: The chemical form of technetium has not been determined.
- I-129: Iodine is not expected to be present in significant quantity.
- Ra: The chemical form of radium has not been determined.
- Th: The chemical form of thorium has not been determined.
- U: The chemical form of uranium has not been determined.
- Np: The chemical form of neptunium has not been determined.
- Pu: The chemical form of plutonium has not been determined.
