WASTE SOURCE Decommissioning of PIE facilities.

PHYSICAL CHARACTERISTICS

General description: Examination caves and associated equipment. The gamma scan rig containment vessel will require a suitably-sized container for disposal. It is likely that disposal of the 10t and 35t cranes will require the removal of the Gantry Hall and Loading Bay roofs respectively.

Changes since waste generated: -

Bulk density (t/m³): > 0.50

Comment on density: Waste is a mixture of concrete and steel items. This figure is an estimate of in-situ density.

CHEMICAL COMPOSITION

General description and components (%wt): Steel (71%), lead (7%), concrete (4%), other materials (18%) e.g. PVC, plastics, lead, glass. Estimate based on theoretical density and percentage breakdown by volume.

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off-site	Stream volume %
Size reduction	Off-site	~ 3.0
Decay storage		
Low force compaction		
Supercompaction (HFC)		
Incineration		
Drying/dewatering/liquid separation	Off-site	~ 63.2
Tie down/fixatives/strippable coating/painting application		
Decontamination		
Metal treatment		
Recycling / reuse		
Thermal treatment, including vitrification		
Encapsulation		
Polymer encapsulation		
Other physical treatment		
Other chemical treatment		
Containerisation		~ 33.8
Treatment not yet determined		
None		

Comments on planned treatments:

It is assumed for UKRWI 2025 that incineration will be extended to this waste stream from similar waste on site. Where no treatment is identified this is assumed to be non-compactable LLW for disposal to the LLWR.

RADIOACTIVITY

Source: The principal sources of radioactivity are fission products (e.g. Cs-137) with a smaller contribution from activation products (e.g. Co-60).

Uncertainty: Data will be clarified upon characterisation.

Measurement of radioactivities: The only radioactivity data available are estimates of beta/gamma contamination (in TBq/m²) on the cave floor and inventories of the fuel types handled. The list of principal nuclides present has been compiled from fuel type and previous inventory which relates to steel cladding.
