WASTE VOLUMES

	Reported (m ³)	OR	Conditioned (m ³)	Packaged (m ³)
Stocks:	At 1.4.2025	~ 109.5		
Future arisings:	1.4.2025 - 31.3.2070	~ 109.5		
Total future arisings:		109.5		
Total waste volume:		218.9		

Number of waste packages in stock: At 1.4.2025..... - packages

Comment on arising rates: The actual volumes of many of these wastes will only be known when they have been retrieved and characterised. The waste is problematic and/or orphan meaning there is no defined waste route therefore future arisings cannot be accurately predicted as waste routes may arise or more problematic and orphan waste may be found.

Additional information on quantities: It has been assumed that these wastes will arise on an irregular basis up to 2070.

Uncertainty factors on volumes: Stock (upper): x 1.50 Arisings (upper): x 3.00
Stock (lower): x 0.67 Arisings (lower): x 0.33

WASTE SOURCE A collection of a number of mainly small volume heterogeneous wastes that arise from a wide range of operational and research activities. The waste is problematic or orphan meaning there is no defined waste route. Waste arisings from a number of facilities both operational and undergoing Post Operational Clean Out/Decommissioning.

PHYSICAL CHARACTERISTICS

General description: The waste is made up of a range of components including monitoring equipment, residues, surplus materials and plant equipment, oils, solvents, lead, resins and miscellaneous chemicals. Some of the wastes may have degraded during storage.

Changes since waste generated: -

Bulk density (t/m³): NE

Comment on density: The mean bulk density will vary from waste to waste.

CHEMICAL COMPOSITION

General description and components (%wt): The waste is made up of a range of materials consisting of chemicals, uranium and plutonium metals and oxide powders, calcium metal and calcium fluoride slags and other miscellaneous components.

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off-site	Stream volume %
Size reduction		
Decay storage		
Low force compaction		
Supercompaction (HFC)		
Incineration		
Drying/dewatering/liquid separation		
Tie down/fixatives/strippable coating/painting application		
Decontamination		
Metal treatment		
Recycling / reuse		
Thermal treatment, including vitrification		
Encapsulation		
Polymer encapsulation		
Other physical treatment		
Other chemical treatment		
Containerisation		
Treatment not yet determined	Off-site	= 100.0
None		

Comments on planned treatments:

Not known as the waste is problematic and a waste route has not been identified. Therefore treatment and disposal options are unknown.
