WASTE SOURCE The waste stream consist of the equipment used to produce Sr-90 titanate sources for the RIPPLE (Radio Isotope Powered Prolonged Life Equipment) generators.

PHYSICAL CHARACTERISTICS

General description: 9 wooden crates and 1 metal tank containing the disassembled plant that was used to produce the RIPPLE sources during the late 60's and early 70's at Harwell. The disassembled plant is contaminated with strontium titanate.

Changes since waste generated: -

Bulk density (t/m³): ~ 0.65

Comment on density: Based on recorded masses and volumes of outer containers.
