Comment on arising rates: -

Additional information on quantities: Following the completion of the ponds decontamination project a total of 2m3 of LLW shavings was produced and contained in 8 drums in the NCAW. Under the current LTP strategy no further LLW shavings are planned to be generated, therefore future arisings will be 0m3. Volume has reduced by 1m3 due to consignment of waste during 2018.

WASTE SOURCE Concrete wastes from scabbling of fuel ponds and Magnox vault walls. The waste stream includes both ponds, both Magnox Wet Vaults and both Splitter Vane Vaults. The scabbling technique will remove both the surface coating (paint) and a thickness of underlying concrete. The wall thickness removed will be 5 mm.

PHYSICAL CHARACTERISTICS

General description: Concrete that has been in contact with fuel pond water, with items held in the pond and in the Magnox Vaults (both wet and dry). There are no large items.

Changes since waste generated: -

Bulk density (t/m³): ~ 1.5

Comment on density: The density is of the waste as prepared for packaging.

CHEMICAL COMPOSITION

RADIOACTIVITY

Source: Contamination of paint and concrete from walls and floors in the fuel ponds. Activity estimates are as shown in the table.

Uncertainty: The values quoted were derived by calculation and are indicative of the activities that are expected.

Measurement of radioactivities: The specific activities have been estimated from waste stream fingerprint normalised to measurements of the Cs137 activity.

Chemical form of radionuclides:

H-3: Any tritium is expected to be present as water, but some may be in the form of other inorganic compounds or as organic compounds.

C-14: Chemical form of carbon 14 has not been determined but may be graphite.

Cl-36: The chemical form of chlorine 36 has not been determined.

Se-79: The selenium content is insignificant.

Tc-99: The technetium content is insignificant.

I-129: -

Ra: Radium isotope content is insignificant.

Th: The thorium content is insignificant.

U: Chemical form of uranium has not been determined but may be uranium oxides.

Np: The neptunium content is insignificant.

Pu: Chemical form of plutonium has not been determined but may be plutonium oxides.
