Stock (lower):	x 0.80	Arisings (lower):	x -

WASTE SOURCE The Cold Duct Valve Actuating Room (CDVAR) Plates were previously included in waste stream 9G64. This material has now been identified and characterised and will be disposed of as LLW via a new separate fingerprint. The CDVAR plates are named after the location in which they were stored following their removal as insulation retaining plates around the cold ducts in and around the bio-shield penetration. They were activated by neutron leakage or streaming in a low flux for the life of the reactor.

PHYSICAL CHARACTERISTICS

General description: The CDVAR plates are typically 6mm steel plate cut into sections in the range of 2 to 80 kg, with an average weight of 17 kg.

Changes since waste generated: -

Bulk density (t/m³): ~ 7.9

Comment on density: Density based on weight of 1347 kg and volume of 0.171m³.

CHEMICAL COMPOSITION

General description and components (%wt): 100 % steel plate.

Chemical state: Neutral

Sheet metal proportion / thickness: -

Metals and alloys (%wt):

	(%wt)	Type(s) / Grades(s) with proportions	% of total C14 activity

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off-site	Stream volume %
Size reduction		
Decay storage		
Low force compaction		
Supercompaction (HFC)		
Incineration		
Drying/dewatering/liquid separation		
Tie down/fixatives/strippable coating/painting application		
Decontamination		
Metal treatment		
Recycling / reuse		
Thermal treatment, including vitrification		
Encapsulation		
Polymer encapsulation		
Other physical treatment		
Other chemical treatment		
Containerisation		
Treatment not yet determined		
None		= 100.0
