Number of waste packages in stock: At 1.4.2025..... - packages

Comment on arising rates: Waste arisings are assumed to occur at a uniform rate over 25 years.

Additional information on quantities: Reactor dismantling is assumed to commence in 2035 and last for 25 years.

Uncertainty factors on volumes: Stock (upper): x - Arisings (upper): x 1.20
Stock (lower): x - Arisings (lower): x 0.80

WASTE SOURCE Contaminated soil that has resulted from plant operation and maintenance.

PHYSICAL CHARACTERISTICS

General description: Based on made ground descriptions: Variable mixture of quartzite (sandstone) boulders and cobbles of an orange-brown colour with a sand-gravel clay material.

Changes since waste generated: -

Bulk density (t/m³): ~ 1.5

Comment on density: The bulk density is an estimate and may be subject to revision. Assumes bulkage factor (physical expansion) of 1.3. Available information about the soil types indicates that the bulkage factor could be 1.2 and the density would then be 1.7t/m³.
