Comment on arising rates: -

Additional information on quantities: The stock in 2006/07 was 83.2m3, out of which 18.2m3 was oil, 36m3 was sediment which is now allocated a new waste stream identifier 9G71. The remaining 36m3 was water. In 2017 the volume of 2.94m3 oil was updated to reflect number of drums in stock and volume given by ponds project

PHYSICAL CHARACTERISTICS

General description: -

Changes since waste generated: The water and sediment have been separated from the oil. The oil is drummed and stored in HHISO.

Bulk density (t/m³): = 0.90

Comment on density: There is no information regarding the density of the oil. However the typical density of other oil waste streams is 0.9t/m3.
