WASTE SOURCE The wastes in this stream have not been identified or characterised but are known to have arisen during the reactor and cooling ponds operation and maintenance.

PHYSICAL CHARACTERISTICS

General description: The waste is predominantly stored in drums, packages and boxes : Steel RB's tank, concrete cores, Pantograph equip, PNV Solids, Ponds steel plates, FED Hoover bags, Wood, pump.

Changes since waste generated: -

Bulk density (t/m³): ~ 1.0

Comment on density: The assumption of 1 t/m3 as the average bulk density may be subject to revision.

CHEMICAL COMPOSITION

General description and components (%wt): The waste may be principally carbon steel (>50%). Other components have not been assessed. Fission products, actinides and other activation products will be present as contaminants.

Chemical state: Neutral

RADIOACTIVITY

Source: The waste usually arises from the irradiated fuel handling and pond operations. Components that have been associated with fuel pond operations are likely to be of high activity. Fission products, actinides and other activation products will be present.

Uncertainty: Specific activity is a function of Station operating history. Activity best estimate (taken from a waste stream of similar origin) thought to be accurate to within two orders of magnitude, but not fully assessed.

Measurement of radioactivities: Figures were derived by estimation based upon available information.

Chemical form of radionuclides:

- H-3: Tritium may be present as water or in the form of other inorganic or organic compounds.
- C-14: Chemical form of carbon 14 has not been determined but may be graphite.
- Cl-36: -
- Se-79: The chemical form of selenium has not been determined.
- Tc-99: The chemical form of technetium has not been determined.
- I-129: -
- Ra: Radium isotope content is insignificant.
- Th: Thorium isotope content is insignificant.
- U: Chemical form of uranium isotopes has not been determined but may be uranium oxides.
- Np: The chemical form of neptunium has not been determined.
- Pu: Chemical form of plutonium isotopes has not been determined but may be plutonium oxides.
