Conditioning method:

"The waste will be conditioned to satisfy the disposal requirements which are effective at the time of retrieval/conditioning. It is currently assumed that the waste will be placed in 'baskets' in the waste packages and will be encapsulated."

Conditioning plants:

Plant Name	Location
Dungeness B Waste Management Centre (WMC)	Dungeness B

Likely conditioning matrix:

-

Further information on the conditioning matrix:

Conditioning matrix will be BFS/OPC. Mix ratios are yet to be established.

Waste Packaging:

Range in container waste loading:

Other information on packaging and conditioning:

Waste will be retained on site pending Final Site Clearance, to let nuclides such as Co-60 undergo considerable radioactive decay. Baskets of different Final Site Clearance ILW wastes may be in the same waste package.

Conditioned density (t/m³):
Conditioned density comment:

~ 3.0
The density of the encapsulated waste is expected to be approximately 3 t/m³.

RADIOACTIVITY

Source:

Irradiated components removed from the reactor. Activated material removed from the reactor core is likely to be of high specific activity.

Uncertainty:

Specific activity is a function of station operating history. The values quoted are indicative of the activities that might be expected.

Measurement of radioactivities:

"Estimates are based upon theoretical assessments. Other beta/gamma nuclides of arisings and stocks (in TBq/m³) include Cr51 (4E+02, 3E-01); Co58 (1E+02, 1E+0); Nb95 (3E-01, 7E-04) and Ru103 (2E-04, 6E-07). Other beta/gamma nuclides will also include Fe59."
