WASTE SOURCE Spent ion exchange materials.

PHYSICAL CHARACTERISTICS

General description: The waste is expected to be Purolite ion exchange material type NRW37(H/OH) (mixed bed resin). Also sludge associated with the ion exchange material. Some filter sand may also be accumulated with the ion exchange material. The ion exchange material is stored under water in tanks and should be easily pumped and have rapid settling characteristics. There are no large items which may require special handling.

Changes since waste generated: -

Bulk density (t/m³): = 1.1
