TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off-site	Stream volume %
Size reduction Decay storage Low force compaction Supercompaction (HFC) Incineration Drying/dewatering/liquid separation Tie down/fixatives/strippable coating/painting application Decontamination Metal treatment Recycling / reuse Thermal treatment, including vitrification Encapsulation Polymer encapsulation Other physical treatment Other chemical treatment Containerisation Treatment not yet determined None	Off-site	= 100.0

Comments on planned treatments:

Further treatments not yet determined but assumed to be encapsulation. The waste will be incinerated if possible or high force compaction may be used to condition the waste depending on the oil content and other factors which may affect these methods of treatment.

RADIOACTIVITY

Source: Contaminated sludge. Contamination by activation products will be the main source of activity.

Uncertainty: Specific activity is a function of station operating history. Present analysis based predominantly on collected samples.

Measurement of radioactivities: Predominantly radiochemical analysis of samples.

Chemical form of radionuclides:

- H-3: As tritiated water
- C-14: As graphite
- Cl-36: To be determined
- Se-79: Not significant
- Tc-99: Not significant
- I-129: Not significant
- Ra: To be determined
- Th: To be determined
- U: To be determined
- Np: To be determined
