WASTE SOURCE Waste arises from the treatment of active effluent. Occasionally sludge cannot be transferred to purpose built storage vessels and is removed from process/treatment vessels into drums, IBCs or similar containers for storage prior to characterisation and disposal.

PHYSICAL CHARACTERISTICS

General description: Sludge recovered from active effluent treatment plant vessels. Sludge (100% vol) no others items identified.

Changes since waste generated: -

Bulk density (t/m³): ~ 2.0

Comment on density: Waste density is an estimate based on average of current arisings.
