RADIOACTIVITY

Source: Contaminated sludge. Contamination by activation products will be the main source of activity.

Uncertainty: The values quoted are indicative of the activities that may be expected. The values quoted were based on theoretical assessments. The activities indicate a maximum total specific activity based upon operating experience and assume significant oxide spalling.

Measurement of radioactivities: Theoretical estimates. Stock activities of Mn54, Co60, Cs134, Cs137, Eu154, Eu155, Am241 are derived from tank sampling.
