WASTE SOURCE

The UK EPR provides for the use of an evaporator to minimise radioactive liquid effluents arising from the TEU [LWPS]. Evaporation will be used to minimise the discharge of active aqueous effluents. Evaporation of effluents results in the production of a sludge-like concentrate that will contain the bulk of the radioactivity initially present in aqueous effluent streams as activated metal oxides.

PHYSICAL CHARACTERISTICS

General description: The UK EPR provides for the use of an evaporator to minimise radioactive liquid effluents arising from the Liquid waste processing system [LWPS]. Evaporation will be used to minimise the discharge of active aqueous effluents. Evaporation of effluents results in the production of a sludge-like concentrate that will contain the bulk of the radioactivity initially present in aqueous effluent streams as activated metal oxides.

Changes since waste generated: -

Bulk density (t/m³): ~ 1.1

Comment on density: Density of raw waste

CHEMICAL COMPOSITION

General description and components (%wt): Sludge-like concentrate that will contain the bulk of the radioactivity initially present in aqueous effluent streams as activated metal oxides. %wt breakdown not yet known.

Chemical state: -

Sheet metal proportion / thickness: If metals also hazardous then reported in the hazardous section.

Metals and alloys (%wt):

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off-site	Stream volume %
Size reduction	On-site	= 100.0
Decay storage		
Low force compaction		
Supercompaction (HFC)		
Incineration		
Drying/dewatering/liquid separation		
Tie down/fixatives/strippable coating/painting application		
Decontamination		
Metal treatment		
Recycling / reuse		
Thermal treatment, including vitrification		
Encapsulation		
Polymer encapsulation		
Other physical treatment		
Other chemical treatment		
Containerisation		
Treatment not yet determined		
None		

Comments on planned treatments:

Encapsulation
